ER/LA OPIOID REMS:
Achieving Safe Use While Improving Patient Care

Presented by CO*RE Collaboration for REMS Education
www.core-rems.org
On July 9, 2012, the Food and Drug Administration (FDA) approved a Risk Evaluation and Mitigation Strategy (REMS) for extended-release (ER) and long-acting (LA) opioid medications.

Founded in June, 2010, the Collaborative on REMS Education (CO*RE), a multi disciplinary team of 10 partners and 3 cooperating organizations, has designed a core curriculum based on needs assessment, practice gaps, clinical competencies, and learner self-assessment to meet the requirements of the FDA REMS Blueprint.

WHY PRESCRIBER EDUCATION IS IMPORTANT

Introduction
Prescribers of ER/LA Opioids Should Balance:

The benefits of prescribing ER/LA opioids to treat pain

The risks of serious adverse outcomes

ER/LA opioid analgesics should be prescribed only by health care professionals who are knowledgeable in the use of potent opioids for the management of pain
Opioid Misuse/Abuse is a Major Public Health Problem

Improper use of any opioid can result in serious AEs including overdose & death

This risk can be greater w/ ER/LA opioids

**ER opioid dosage units contain more opioid than IR formulations**

**Methadone is a potent opioid with a long, highly variable half-life**

In 2012

37 million Americans age ≥12 had used an opioid for nonmedical use some time in their life

In 2011

488,004 ED visits involved nonmedical use of opioids

- Methadone involved in 30% of prescription opioid deaths

In 2011

41,340 Americans DIED FROM DRUG POISONINGS

Nearly 17,000 deaths involved prescription opioids

In 2008

For every 1 death there are:

- 10 treatment admissions for abuse
- 32 ED visits for misuse or abuse
- 130 people who abuse or are addicted
- 825 nonmedical users

First-Time Use of Specific Drugs Among Persons Age ≥ 12 (2012)

Learning Objectives

Describe appropriate patient assessment for treatment with ER/LA opioid analgesics, evaluating risks and potential benefits of ER/LA therapy, as well as possible misuse.

Apply proper methods to initiate therapy, modify dose, and discontinue use of ER/LA opioid analgesics, applying best practices including accurate dosing and conversion techniques, as well as appropriate discontinuation strategies.

Demonstrate accurate knowledge about how to manage ongoing therapy with ER/LA opioid analgesics and properly use evidence-based tools while assessing for adverse effects.

Employ methods to counsel patients and caregivers about the safe use of ER/LA opioid analgesics, including proper storage and disposal.

Review/assess general and product-specific drug information concerning ER/LA opioid analgesics and identifying potential adverse effects of ER/LA opioids.
Misuse, abuse, divergence and overdose of ER/LA opioids is a major public health crisis.

YOU and YOUR TEAM can have an immediate and positive impact on this crisis while also caring for your patients appropriately.
ASSESSING PATIENTS FOR TREATMENT WITH ER/LA OPIOID ANALGESIC THERAPY

Unit 1
Balance Risks Against Potential Benefits

**Conduct thorough H&P and appropriate testing**

**Benefits Include**
- Analgesia (adequate pain control)
- Improved Function

**Comprehensive benefit-to-harm evaluation**

**Risks Include**
- Overdose
- Life-threatening respiratory depression
- Abuse by patient or household contacts
- Misuse & addiction
- Physical dependence & tolerance
- Interactions w/ other medications & substances
- Risk of neonatal withdrawal syndrome w/ prolonged use during pregnancy
- Inadvertent exposure/ingestion by household contacts, especially children

---

Adequately DOCUMENT all patient interactions, assessments, test results, & treatment plans
Clinical Interview: Patient Medical History

### Illness relevant to (1) effects or (2) metabolism of opioids

1. Pulmonary disease, constipation, nausea, cognitive impairment
2. Hepatic, renal disease

### Illness possibly linked to substance abuse, e.g.:

- Hepatitis
- HIV
- Tuberculosis
- Cellulitis
- STIs
- Trauma, burns
- Cardiac disease
- Pulmonary disease

---

Clinical Interview: Pain & Treatment History

Description of pain

- Location
- Intensity
- Quality
- Onset/Duration
- Variations / Patterns / Rhythms

What relieves the pain?

What causes or increases pain?

Effects of pain on physical, emotional, and psychosocial function

Patient’s pain & functional goals

Pain Medications

Past use

Current use
- Query state PDMP where available to confirm patient report
- Contact past providers & obtain prior medical records
- Conduct UDT

Dosage
- For opioids currently prescribed: opioid, dose, regimen, & duration
  - Important to determine if patient is opioid tolerant

General effectiveness

Nonpharmacologic strategies & effectiveness
Perform Thorough Evaluation & Assessment of Pain

Seek objective confirmatory data

Components of patient evaluation for pain

Order diagnostic tests (appropriate to complaint)

General: vital signs, appearance, posture, gait, & pain behaviors

Musculoskeletal Exam
- Inspection
- Palpation
- Percussion
- Auscultation
- Provocative maneuvers

 Neurologic exam

Cutaneous or trophic findings

Assess Risk of Abuse, Including Substance Use & Psychiatric Hx

*Obtain a complete Hx of current & past substance use*

- Prescription drugs
- Illegal substances
- Alcohol & tobacco
  - Substance abuse Hx does not prohibit treatment w/ ER/LA opioids but may require additional monitoring & expert consultation/referral
- Family Hx of substance abuse & psychiatric disorders
- Hx of sexual abuse

**Social history also relevant**

Employment, cultural background, social network, marital history, legal history, & other behavioral patterns
### Risk Assessment, cont’d

<table>

**Scoring Totals:**

Screener & Opioid Assessment for Patients with Pain (SOAPP)®

Identifies patients as at high, moderate, or low risk for misuse of opioids prescribed for chronic pain

How is SOAPP® administered?

- Usually self-administered in waiting room, exam room, or prior to an office visit
- May be completed as part of an interview w/ a nurse, physician, or psychologist
- Prescribers should have a completed & scored SOAPP® while making opioid treatment decisions

The SOAPP® Version 1.0 Tutorial. https://painedu.org/soapp-tutorial_01.asp
SOAPP®: Available in 4 Formats to Assess Misuse Risk

© CO*RE 2015
When to Consider a Trial of an Opioid

Potential benefits are likely to outweigh risks

Failed to adequately respond to nonopioid & nondrug interventions

Continuous, around-the-clock opioid analgesic is needed for an extended period of time

Pain is chronic and severe

No alternative therapy is likely to pose as favorable a balance of benefits to harms

When to Consider a Trial of an Opioid, cont’d

60-yr-old w/ chronic disabling OA pain

- Nonopioid therapies not effective, IR opioids provided some relief but experienced end-of-dose failure
- No psychiatric/medical comorbidity or personal/family drug abuse Hx
  - High potential benefits relative to potential risks
  - Could prescribe opioids to this patient in most settings w/ routine monitoring

30-yr-old w/ fibromyalgia & recent IV drug abuse

- High potential risks relative to benefits (opioid therapy not 1st line for fibromyalgia)
- Requires intensive structure, monitoring, & management by clinician w/ expertise in both addiction & pain
  - Not a good candidate for opioid therapy

Selection of patients between these 2 extremes requires:

**Careful assessment & characterization of patient risk**

**Structuring of care to match risk**

In patients with a history of substance abuse or a psychiatric comorbidity, this may require assistance from experts in managing pain, addiction, or other mental health concerns.

In some cases opioids may not be appropriate or should be deferred until the comorbidity has been adequately addressed.

- Consider referral

Referring High-Risk Patients

Prescribers should

Understand when to appropriately refer high-risk patients to pain management or addiction specialists

Also check your state regulations for requirements

Special Considerations: Elderly Patients

Does patient have medical problems that increase risk of opioid-related AEs?

Respiratory depression more likely in elderly, cachectic, or debilitated patients

- Altered PK due to poor fat stores, muscle wasting, or altered clearance
- Monitor closely, particularly when
  - Initiating & titrating ER/LA opioids
  - Given concomitantly w/ other drugs that depress respiration
- Reduce starting dose to 1/3 to 1/2 the usual dosage in debilitated, non-opioid-tolerant patients
- Titrate dose cautiously

Older adults more likely to develop constipation

- Routinely initiate a bowel regimen before it develops

Is patient/caregiver likely to manage opioid therapy responsibly?
Special Considerations: Pregnant Women

Managing chronic pain in pregnant women is challenging, & affects both mother and fetus

Potential risks of opioid therapy to the newborn include:

- Low birth weight
- Premature birth
- Hypoxic-ischemic brain injury
- Neonatal death
- Prolonged QT syndrome
- Neonatal opioid withdrawal syndrome

Given these potential risks, clinicians should:

- Counsel women of childbearing potential about risks & benefits of opioid therapy during pregnancy & after delivery
- Encourage minimal/no opioid use during pregnancy, unless potential benefits outweigh risks

If chronic opioid therapy is used during pregnancy, anticipate & manage risks to the patient and newborns
Special Considerations: Children (<18 years)

Safety & effectiveness of most ER/LA opioids unestablished

Pediatric analgesic trials pose challenges
Transdermal fentanyl approved in children aged ≥2 yrs

Most opioid studies focus on inpatient safety

Opioids are common sources of drug error

Opioid indications are primarily life-limiting conditions

Few children with chronic pain due to non-life-limiting conditions should receive opioids

When prescribing opioids to children:

Consult pediatric palliative care team or pediatric pain specialist or refer to a specialized multidisciplinary pain clinic

Case:

Peter
25-Year-Old Male
Case: Peter

New to area, presents at 4:45 PM on Friday

- Chronic left knee pain from a MVA 5 yrs ago
- Wants oxycodone ER & oxycodone IR for “rescue”

Hx

- 3 knee surgeries—last was 18 mo ago
- Persistent ambulatory dysfunction—granted disability
- Prior therapies: medications, supporting devices, & PT
  - Only oxycodone ER works
    - Allergic to acetaminophen & NSAIDs
    - Morphine & codeine make him throw up
  - PT sessions not helpful

Physical examination of knee

- No erythema, swelling, or bruising; surgical scars present
- Left quadriceps has signs of atrophy compared to right side
- Limited ROM on flexion of left knee
### Peter: Assess Abuse Risk w/ 5-Q

<table>
<thead>
<tr>
<th>How often:</th>
<th>Never=0</th>
<th>Seldom=1</th>
<th>Sometimes=2</th>
<th>Often=3</th>
<th>Very often=4</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Do you have mood swings?</td>
<td></td>
<td>✔️</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Do you smoke a cigarette within an hr after you wake up?</td>
<td></td>
<td></td>
<td></td>
<td>✔️</td>
<td></td>
</tr>
<tr>
<td>3. Have you taken medication other than the way that it was prescribed?</td>
<td>✔️</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Have you used illegal drugs (e.g., marijuana, cocaine) in past 5 yrs?</td>
<td>✔️</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. In your lifetime, have you had legal problems or been arrested?</td>
<td>✔️</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Total Score: 7

(Cutoff is 4)=high risk for prescription opioid misuse

After further questioning:
- Admits smoking 1 cigarette pack/d for 10 yrs
- Claims occasional marijuana use, not for last 2 yrs
Peter: Assess Abuse Risk

Ask for contact details of prior regular physician
• No info w/ him—can get it on Monday if you give him a prescription now

Ask Peter to provide a urine sample for testing
• He accuses you of not trusting him
• Explain it is your office policy for a new patient being considered for a controlled substance
  – He goes with your nurse

Access your state’s PDMP: 6-month report
• Received 28 prescriptions from 4 physicians, using 5 pharmacies
  – Left quadriceps has signs of atrophy compared to right side
• Some paid for w/ insurance, others w/ cash
Peter: UDT & Results

POC immunoassay cup tests for THC, cocaine, opiates, methamphetamine, & amphetamine

- Only detects naturally occurring opiates – morphine & codeine
- Semisynthetic oxycodone not reliably detected
  - Included in some, but not all panels – always check

POC test positive for THC & negative for other substances

Second sample sent to laboratory, w/ request for a pain management profile that includes oxycodone

- Adulterant panel, THC, cocaine, opiates, & oxycodone
Peter: What Now? Should You:

1. Write a 4-day supply of ER & IR oxycodone, to last until you contact his previous prescriber on Monday.

2. Not write a prescription today, since he lied about prescribers & drug use. Untreated addiction prevents you from addressing his pain; refer to a pain management physician w/ addiction expertise.

3. Write 30-day prescriptions for ER & IR oxycodone while you carry out diagnostic tests on his injury, obtain his prior medical records, & review test results.

Answer 2 is correct.
Peter: Case Summary

Several red flags raised:

- PDMP report revealed probable doctor shopping
- UDT positive for recent cocaine use, which he denied
- SOAPP score suggests risk for prescription drug misuse
- DEA identified modus operandi used by a drug-seeking patient
  - Wants appointment toward end of office hrs
  - Requests specific controlled substance
  - Claims nonopioid analgesics do not work or allergy
  - Reluctant to give name of primary physician
- Younger age

Peter may have a pain problem:

- Beyond your scope of practice to manage while his addiction is untreated
- Refer to pain management or addiction specialist
It is 4 pm on Friday and you are four patients behind schedule. Mr. Kingston asks you to increase his current dosage of hydrocodone, because he says it is not relieving his pain. It would take you two minutes to say yes.

Red Flag: Adjusting a prescription without performing appropriate evaluation or screening

Action: Check your local PDMP. Employ practice management strategies that maximize efficiency.
- Patient-administered screening tools
- Office staff to administer and score tools, document results, and communicate to the prescriber
Ms. Van Buskirk says she needs opioids to manage her pain until she can have surgery. She reports continued delays in getting to surgery. You phone the surgeon and discover that no date has been set and that she has cancelled several appointments.

**Red Flag:** Patient may be stalling to continue an opioid regimen

**Action:** Set expectations for time limitations. Offer non-medicine and non-opioid options for pain management. Consider referral to addiction specialist.
Unit 1

Pearls for Practice

Document EVERYTHING

Conduct a Comprehensive H&P

*General and pain-specific*

Assess Risk of Abuse

Compare Risks with Expected Benefits

Determine Whether a Therapeutic Trial is Appropriate
INITIATING THERAPY, MODIFYING DOSING, & DISCONTINUING USE OF ER/LA OPIOID ANALGESICS

Unit II
Federal & State Regulations

Comply w/ federal & state laws & regulations that govern the use of opioid therapy for pain

Federal

• Code of Federal Regulations, Title 21 Section 1306: rules governing the issuance & filling of prescriptions pursuant to section 309 of the Act (21 USC 829)
  - www.deadiversion.usdoj.gov/21cfr/cfr/2106cfrt.htm

# Initiating Treatment

*Prescribers should regard initial treatment as a therapeutic trial*

<table>
<thead>
<tr>
<th>May last from several weeks to several months</th>
</tr>
</thead>
<tbody>
<tr>
<td>Decision to proceed w/ long-term treatment should be intentional &amp; based on careful consideration of outcomes during the trial</td>
</tr>
</tbody>
</table>

- Progress toward meeting therapeutic goals
- Presence of opioid-related AEs
- Changes in underlying pain condition
- Changes in psychiatric or medical comorbidities
- Identification of aberrant drug-related behavior, addiction, or diversion

ER/LA Opioid-Induced Respiratory Depression

Chief hazard of opioid agonists, including ER/LA opioids

- If not immediately recognized & treated, may lead to respiratory arrest & death
- Greatest risk: initiation of therapy or after dose increase

Manifested by reduced urge to breathe & decreased respiration rate

- Shallow breathing
- CO₂ retention can exacerbate opioid sedating effects

Instruct patients/family members to call 911*

- Managed w/ close observation, supportive measures, & opioid antagonists, depending on patient’s clinical status

ER/LA Opioid-Induced Respiratory Depression

More likely to occur

- In elderly, cachectic, or debilitated patients
  - **Contraindicated** in patients with respiratory depression or conditions that increase risk
- If given concomitantly with other drugs that depress respiration

Reduce risk

- Proper dosing & titration are essential
- **Do not overestimate** dose when converting dosage from another opioid product
  - Can result in fatal overdose with first dose
- Instruct patients to swallow tablets/capsules whole
  - Dose from cut, crushed, dissolved, or chewed tablets/capsules may be fatal, particularly in opioid-naïve individuals

FDA. Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics. 08/2014. 
Initiating & Titrating: Opioid-Naïve Patients

Drug & dose selection is critical

Monitor patients closely for respiratory depression

Individualize dosage by titration based on efficacy, tolerability, & presence of AEs

Some ER/LA opioids or dosage forms are only recommended for opioid-tolerant patients

- ANY strength of transdermal fentanyl or hydromorphone ER
- Certain strengths/doses of other ER/LA products (check drug PI)

Especially within 24-72 h of initiating therapy & increasing dosage

Check ER/LA opioid product PI for minimum titration intervals

Supplement w/ IR analgesics (opioids & nonopioid) if pain is not controlled during titration

Patients considered opioid tolerant are taking at least

- 60 mg oral morphine/day
- 25 mcg transdermal fentanyl/hr
- 30 mg oral oxycodone/day
- 8 mg oral hydromorphone/day
- 25 mg oral oxymorphone/day
- An equianalgesic dose of another opioid

Still requires caution when rotating a patient on an IR opioid to a different ER/LA opioid

For 1 Wk Or Longer

Opioid Rotation

**Definition:**
Change from an existing opioid regimen to another opioid w/ the goal of improving therapeutic outcomes or to avoid AEs attributed to the existing drug, e.g., myoclonus

**Rationale:**
Differences in pharmacologic or other effects make it likely that a switch will improve outcomes

- Effectiveness & AEs of different mu opioids vary among patients
- Patients show incomplete cross-tolerance to new opioid
  - Patient tolerant to 1st opioid can have improved analgesia from 2nd opioid at a dose lower than calculated from an EDT

Mu Opioid Receptors & Incomplete Cross-Tolerance

Mu opioids bind to mu receptors

Many mu receptor subtypes:

Mu opioids produce subtly different pharmacologic response based on distinct activation profiles of mu receptor subtypes

May help explain:

Inter-patient variability in response to mu opioids

Incomplete cross-tolerance among mu opioids
Incomplete Cross-Tolerance

**Challenge drug:**

<table>
<thead>
<tr>
<th>Drug</th>
<th>Receptor Subtype Selectivity</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>1+3</td>
</tr>
<tr>
<td>B</td>
<td>2+3</td>
</tr>
<tr>
<td>C</td>
<td>1</td>
</tr>
<tr>
<td>D</td>
<td>1+2+3</td>
</tr>
</tbody>
</table>

**Cross-tolerance if tolerant to drug:**

<table>
<thead>
<tr>
<th></th>
<th>A</th>
<th>B</th>
<th>C</th>
<th>D</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>-</td>
<td>Partial</td>
<td>Partial</td>

<td>Yes</td>
<td>No</td>
<td>-</td>
<td>Yes</td>
</tr>
<tr>
<td>D</td>
<td>Partial</td>
<td>Partial</td>
<td>Partial</td>
<td>-</td>
</tr>
</tbody>
</table>
Reasons for Opioid Rotation

Poor opioid responsiveness:
- Dose titration yields intolerable/unmanageable AEs
- Poor analgesic efficacy despite dose titration

Other potential reasons:
- Patient desire or need to try a new formulation
- Cost or insurance issues
- Adherence issues
- Concern about abuse or diversion
- Change in clinical status requires an opioid with different PK
- Problematic drug-drug interactions
Equianalgesic Doses

Opioid rotation requires calculation of an approximate equianalgesic dose

<table>
<thead>
<tr>
<th>Equianalgesic dose is a construct derived from relative opioid potency estimates</th>
<th>Relative potency estimates</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Potency refers to dose required to produce a given effect</td>
<td>• Ratio of doses necessary to obtain roughly equivalent effects</td>
</tr>
<tr>
<td></td>
<td>• Calculate across drugs or routes of administration</td>
</tr>
<tr>
<td></td>
<td>• Relative analgesic potency is converted into an equianalgesic dose by applying the dose ratio to a standard</td>
</tr>
</tbody>
</table>
Equianalgesic Dose Tables (EDT)

Many different versions:
- Published
- Online
- Online Interactive
- Smart-phone apps

Vary in terms of:
- Equianalgesic values
- Whether ranges are used
- Which opioids are included: May or may not include transdermal opioids, rapid-onset fentanyl, ER/LA opioids, or opioid agonist-antagonists
## Example of an EDT for Adults

<table>
<thead>
<tr>
<th>Drug</th>
<th>Equianalgesic Dose</th>
<th>Usual Starting Doses</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>SC/IV</td>
<td>PO</td>
</tr>
<tr>
<td>Morphine</td>
<td>10 mg</td>
<td>30 mg</td>
</tr>
<tr>
<td>Oxycodone</td>
<td>NA</td>
<td>20 mg</td>
</tr>
<tr>
<td>Hydrocodone</td>
<td>NA</td>
<td>30 mg</td>
</tr>
<tr>
<td>Hydromorphone</td>
<td>1.5 mg</td>
<td>7.5 mg</td>
</tr>
</tbody>
</table>
Limitations of EDTs

**Did Not Consider**

<table>
<thead>
<tr>
<th>Chronic dosing</th>
<th>High opioid doses</th>
<th>Other routes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Different pain types</td>
<td>Comorbidities or organ dysfunction</td>
<td>Gender, ethnicity, advanced age, or concomitant medications</td>
</tr>
<tr>
<td>Direction of switch from 1 opioid to another</td>
<td>Inter-patient variability in pharmacologic response to opioids</td>
<td>Incomplete cross-tolerance among mu opioids</td>
</tr>
</tbody>
</table>
Utilizing Equianalgesic Doses

Incomplete cross-tolerance & inter-patient variability require use of conservative dosing when converting from one opioid to another

Equianalgesic dose a starting point for opioid rotation

**Intended as General Guide**

Calculated dose of new drug based on EDT must be reduced, then titrate the new opioid as needed

Closely follow patients during periods of dose adjustments

*Follow conversion instructions in individual ER/LA opioid PI, when provided*
## Guidelines for Opioid Rotation

**Reduce calculated equianalgesic dose by 25%-50%**

**Select % reduction based on clinical judgment**

<table>
<thead>
<tr>
<th>Closer to 50% reduction if patient is</th>
<th>Closer to 25% reduction if patient</th>
</tr>
</thead>
</table>
| - Receiving a relatively high dose of current opioid regimen  
  - Elderly or medically frail | - Does not have these characteristics  
  - Is switching to a different administration route of same drug |

*75%-90% reduction for methadone*
Guidelines for Opioid Rotation, cont’d

If switching to methadone:

- Standard EDTs are less helpful in opioid rotation to methadone
- In opioid tolerant patients, methadone doses should not exceed 30-40 mg/day upon rotation.
  - Consider inpatient monitoring, including serial EKG monitoring
- In opioid-naïve patients, methadone should not be given as an initial drug

If switching to transdermal:

- **Fentanyl**, calculate dose conversion based on equianalgesic dose ratios included in the PI
- **Buprenorphine**, follow instructions in the PI
Have a strategy to frequently assess analgesia, AEs and withdrawal symptoms.

Titrate new opioid dose to optimize outcomes & safety.

Dose for breakthrough pain (BTP) using a short-acting, immediate release preparation is 5%-15% of total daily opioid dose, administered at an appropriate interval.

If oral transmucosal fentanyl product is used for BTP, begin dosing lowest dose irrespective of baseline opioid dose.

NEVER use ER/LA opioids for BTP.
Guideline for Opioid Rotation: Summary

**Values from EDT***
- Value of Current Opioid
- Value of New Opioid

**Patient opioid values**
- 24 Hr dose of Current Opioid
- X Amount of New Opioid

**“Solve” for X**
- Equinalgesic 24 Hr Dose of New Opioid

**Automatically reduce dose**
- By 25% – 50%

- Frequently assess initial response
- Titrate dose of new opioid to optimize outcomes
- Calculate supplemental rescue dose used for titration at 5%-15% of total daily dose‡

*If switching to transdermal fentanyl, use equianalgesic dose ratios provided in PI
†If switching to methadone, reduce dose by 75%-90%
‡If oral transmucosal fentanyl used as rescue, begin at lowest dose irrespective of baseline opioid
## Breakthrough Pain in Chronic Pain Patients

<table>
<thead>
<tr>
<th>Patients on stable ATC opioids may experience BTP</th>
<th>Therapies</th>
<th>Consider adding</th>
</tr>
</thead>
</table>
| Disease progression or a new or unrelated pain   | • Directed at cause of BTP or precipitating factors  
• Nonspecific symptomatic therapies to lessen impact of BTP | • PRN IR opioid trial based on analysis of benefit versus risk  
  – Risk for aberrant drug-related behaviors  
  – High-risk: only in conjunction w/ frequent monitoring & follow-up  
  – Low-risk: w/ routine follow-up & monitoring | • Nonopioid drug therapies  
• Nonpharmacologic treatments |

© CO*RE 2015
Case:

Wilma
73-Year-Old Female
Advanced Colon Cancer
- w/ peritoneal & liver metastases

Presents w/ increasing abdominal pain
- Wakes frequently at night in severe pain

Regimen: oxycodone IR 5 mg q6h + 1 at bedtime
- She has some resistance to opioids
  - Morphine means she’s about to “die” & methadone is for “addicts”
  - Does not like to take a lot of pills

Consider rotating to an ER/LA opioid: fewer pills & may allow her to sleep through the night
- Her total current oxycodone dose is 25 mg/d
- She is NOT opioid tolerant
  - Would require 30 mg oral oxycodone/d for a wk or longer
Rotation Options for Wilma

No option for hydromorphone ER or transdermal fentanyl

Only for opioid-tolerant patients

Avoid morphine & methadone due to her resistance

Consider oxymorphone ER: calculate equianalgesic dose

\[
\frac{20}{10} = \frac{25}{X} \\
10 \times 25 = 250 = 20X \\
X = 12.5 \\
mg \text{ oxymorphone/d}
\]

Reduce by 25% for safety = 9.4 mg oxymorphone ER/d

Wilma was on low dose of oxycodone so 25% reduction is reasonable

Start oxymorphone ER 5 mg q12h w/ oxycodone IR 5 mg PRN for BTP
Rotation Options for Wilma cont’d

Values from EDT*

- Value of Current Opioid
- Value of New Opioid

Patient opioid values

- 24 Hr dose of Current Opioid
- X Amount of New Opioid

“Solve” for X

- Equinalgesic 24 Hr Dose of New Opioid

Automatically reduce dose

- By 25% – 50%
Advise Wilma to call

- Tomorrow to check in
- Any time to let you know...
  - If her pain worsens
  - She needs >2 doses of BTP medication/d
  - She experiences AEs

Caution Wilma*

- Store securely to prevent accidental exposure or theft
  - May result in serious harm/death (especially children) & can be abused
- Do not share w/ others
- Swallow whole: do not crush, chew, or dissolve
- Do not consume alcohol or use prescription or OTC products w/ alcohol
- Take Patient Counseling Document to any doctor visits

* Go over the Patient Counseling Document
Titrate Wilma’s Oxymorphone ER Dose

After 1 week, pain was improved, but still moderate

• She is reluctant to take oxycodone IR for BTP
  – “Too many pills”
• Steady-state plasma oxymorphone ER levels occur within 3 d
  – Dosage may be adjusted every 3 to 7 d
• Increase oxymorphone ER to 7.5 mg q12h w/ oxycodone IR for “emergencies”

Follow-up call the next day

• Pain was much improved
• Able to sleep through the night

Continue to re-evaluate analgesia & AEs
Wilma: Case Summary

<table>
<thead>
<tr>
<th>Good candidate for rotation to an ER/LA opioid:</th>
<th>Choice of ER/LA opioid was limited:</th>
<th>Educate:</th>
<th>Continue to monitor her &amp; titrate if necessary</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pain not well controlled</td>
<td>Not opioid tolerant so cannot rotate to hydromorphone ER or transdermal fentanyl</td>
<td>ER/LA opioids are harmful to people for whom they are not prescribed</td>
<td>Safeguard her medications</td>
</tr>
<tr>
<td>Pain prevents her sleeping through the night</td>
<td>Reluctant to take morphine or methadone</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Does not like to take a lot of pills</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Reasons for Discontinuing ER/LA Opioids

- No progress toward therapeutic goals
- Intolerable & Unmanageable AEs
- Pain level decreases in stable patients
- Nonadherence or unsafe behavior
  - 1 or 2 episodes of increasing dose without prescriber knowledge
  - Sharing medications
  - Unapproved opioid use to treat another symptom (e.g., insomnia)
- Aberrant behaviors suggestive of addiction &/or diversion
  - Use of illicit drugs or unprescribed opioids
  - Repeatedly obtaining opioids from multiple outside sources
  - Prescription forgery
  - Multiple episodes of prescription loss
Taper Dose When Discontinuing

Taper dose to avoid withdrawal symptoms in opioid dependent patient

Recommend outpatient setting for patients without severe medical or psychiatric comorbidities

Recommend rehabilitation setting for patients unable to reduce opioid dose in less structured settings
  • When aberrant drug-related behaviors continue, may need to enforce tapering efforts

May use a range of approaches from slow 10% dose reduction per week to more rapid 25%-50% reduction every few days
Factors that influence the reduction rate:

- Reason for decision to discontinue the opioid
- Presence of medical & psychiatric comorbidities
- Dose
  - Initial rate more rapid at high doses (e.g., >200 mg/d morphine equivalent)
  - Slower rate at low doses (e.g., 60-80 mg/d morphine equivalent)
- Occurrence of withdrawal symptoms as taper is initiated

After taper, continue, substance use, or:

- Continue to treat pain w/ nonopioids analgesics.
- Continue to treat psychiatric disorders.
- If aberrant behaviors may be due to addiction
  - Addiction treatment resources should be made available
  - Motivate patient to seek addiction treatment.
Case:

Ernesto
53-Year-Old Male
Case:

Ernesto

Workplace back injury at age 41 causes chronic back pain

- Partial diskectomy & subsequent L4-5 fusion
- He continues to work in a modified position

Presents for follow-up medication management

- Stable regimen of oxycodone ER 30 mg q12h + hydrocodone/acetaminophen IR 5 mg/500 mg q6h prn for BTP
  - Effectively controls his pain
- You write prescriptions for oxycodone ER & hydrocodone IR
  - Stress he safeguard medication in a locked medication safe
- Ernesto states he rarely takes hydrocodone IR for BTP
  - Not necessary in the last month
  - Has not filled a hydrocodone IR prescription for 6 months
Ernesto: What Now?

1. His pain is perfectly controlled w/ oxycodone ER 30 mg q12h, which you continue to prescribe.

2. His low back condition has improved—may be possible to control pain w/ a lower dose of oxycodone ER.

3. His low back condition has improved—may no longer need around-the-clock treatment w/ oxycodone ER.

To determine course of action, initiate a trial taper:

- Closely monitor pain & withdrawal symptoms
- No concerns about Ernesto seeking drugs or displaying aberrant behaviors, so a slow taper is appropriate
- Help prevent withdrawal symptoms
# Ernesto: Taper Schedule – Month 1

## Current opioid dose is oxycodone 60 mg/d

<table>
<thead>
<tr>
<th>Day</th>
<th>Oxycodone ER 20 mg tablet</th>
<th>Oxycodone IR 5 mg tablet</th>
<th>Total daily dose (mg)</th>
<th>Call on day:</th>
</tr>
</thead>
<tbody>
<tr>

<td>–</td>
<td>q12h</td>
<td>10 (30% decrease)</td>
<td>23: pain controlled, no withdrawal symptoms</td>
</tr>
</tbody>
</table>

Prescribe oxycodone ER 10 mg q12h (#60) + oxycodone IR 5 mg (#90) w/ instructions:
**Ernesto: Follow Up**

### Follow-up visit

- Pain well controlled & no withdrawal symptoms
- Replace scheduled oxycodone IR w/ oxycodone IR 5 mg (#30) as needed for pain if ibuprofen is not effective
- Instruct him to dispose of remaining oxycodone ER & hydrocodone IR
  - DEA National Prescription Drug Take-Back Day scheduled next Saturday

### 1-month follow-up visit

- Has not needed to use oxycodone IR
- Reports good function w/ no pain
- Instruct him to dispose of remaining oxycodone IR
  - No upcoming DEA National Prescription Drug Take Back Day
  - You enter his zip code at [http://rxdrugdropbox.org/](http://rxdrugdropbox.org/)
    - A prescription drug drop box is located in police department of the town in which he works
    - Reassure him if pain recurs, you will manage it
Ernesto: Case Summary

- Not needing BTP opioid suggests pain condition may have improved
  - Determine if he no longer needs oxycodone ER or if a lower dose would be effective

- Slow taper is appropriate, because there is no urgency
  - Goal: minimize withdrawal symptoms while assessing effect on pain
  - Engage patient during taper to monitor pain & withdrawal symptoms

- Dispose of unneeded medications from the home
  - Ensure they are not available to children, pets, & household acquaintances to avoid serious risks from unintended exposure
Challenge: The Broken Stereotype

Red Flag:

Making assumptions about a patient’s risk factors without objective evidence

Ms. Yeun seems like a “good” patient. She has never abused opioids previously. She has been in the practice a long time, has never been a problem, and in fact, is rather enjoyable. She always brings Christmas cookies for the staff around the holidays.

Action: Require all patients receiving opioids to follow a treatment plan and adhere to defined expectations. Evaluate risk in all patients. Use patient-provider agreements, contracts, or other tools.
Challenge: The Early Refill

Red Flag:
Patient requests an early refill every month.

Action: Make sure that patients understand each medication’s dosage, time of day, and maximum daily dose. Ask them to repeat these instructions back to you. Avoid clinical terms such as “PRN” that the patient may not understand.

You have prescribed Mr. Arias a long-acting opioid for low back pain and a short-acting PRN opioid for breakthrough pain. Every month he requests a refill for both prescriptions 3-8 days early. Upon questioning, Mr. Arias tells you that he takes both pills whenever he feels he needs them.
Treat Initiation of Opioids as a Therapeutic Trial

Anticipate ER/LA Opioid-Induced Respiratory Depression

*It can be immediately life-threatening*

Be Conservative and Thoughtful In Dosing

*When initiating, titrating, and rotating opioids*

*First calculate equinalgesic dose, then reduce dose appropriately*

Discontinue ER/LA opioids slowly and safely
MANAGING THERAPY WITH ER/LA OPIOID ANALGESICS

Unit III
Informed Consent

Before initiating a trial of opioid analgesic therapy, confirm patient understanding of informed consent to establish:

- **Analgesic & functional goals of treatment**
- **Expectations**
- **Potential risks**
- **Alternatives to opioids**

**The potential for & how to manage:**

- Common opioid-related AEs (e.g., constipation, nausea, sedation)
- Other serious risks (e.g., abuse, addiction, respiratory depression, overdose)
- AEs after long-term or high-dose opioid therapy (e.g., hyperalgesia, endocrinologic or sexual dysfunction)
Patient-Prescriber Agreement (PPA)

*Document signed by both patient & prescriber at time an opioid is prescribed*

- Clarify treatment plan & goals of treatment w/ patient, patient’s family, & other clinicians involved in patient’s care
- Assist in patient education
- Inform patients about the risks & benefits
- Document patient & prescriber responsibilities
Consider a PPA

Reinforce expectations for appropriate & safe opioid use

- Obtain opioids from a single prescriber
- Fill opioid prescriptions at a designated pharmacy
- Safeguard opioids
  - Do not store in medicine cabinet
  - Keep locked (e.g., use a medication safe)
  - Do not share or sell medication
- Instructions for disposal when no longer needed

- Commitments to return for follow-up visits
- Comply w/ appropriate monitoring
  - E.g., random UDT & pill counts
- Frequency of prescriptions
- Enumerate behaviors that may lead to opioid discontinuation
- An exit strategy
Monitor Patients During Opioid Therapy

<table>
<thead>
<tr>
<th>Therapeutic risks &amp; benefits do not remain static</th>
<th>Identify patients</th>
<th>Periodically assess continued need for opioid analgesic</th>
</tr>
</thead>
</table>
| Affected by change in underlying pain condition, coexisting disease, or psychologic/social circumstances | • Who are benefiting from opioid therapy  
• Who might benefit more w/ restructuring of treatment or receiving additional services (e.g., addiction treatment)  
• Whose benefits from treatment are outweighed by risks | Re-evaluate underlying medical condition if clinical presentation changes |
Monitor Patients During Opioid Therapy, cont’d

Periodically evaluate:

- Pain control
  - Document pain intensity, pattern, & effects
- Functional outcomes
  - Document level of functioning
  - Assess progress toward achieving therapeutic goals
- Health-related QOL
- AE frequency & intensity
- Adherence to prescribed therapies

Patients requiring more frequent monitoring include:

- High-risk patients
- Patients taking high opioid doses
## Anticipate & Treat Common AEs

<table>
<thead>
<tr>
<th>Condition</th>
<th>Most Common AE; Does Not Resolve with Time</th>
<th>Tend to Diminish Over Days or Weeks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Constipation</td>
<td>Initiate a bowel regimen before constipation develops</td>
<td>Oral &amp; rectal antiemetic therapies as needed</td>
</tr>
<tr>
<td></td>
<td>Increase fluid &amp; fiber intake, stool softeners, &amp; laxatives</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Opioid antagonists may help prevent/treat opioid-induced bowel dysfunction</td>
<td></td>
</tr>
<tr>
<td>Drowsiness &amp; Sedation</td>
<td>Tend to Wane Over Time</td>
<td>Pruritus &amp; Myoclonus</td>
</tr>
<tr>
<td></td>
<td>Counsel patients about driving, work &amp; home safety as well as risks of concomitant exposure to other drugs &amp; substances w/ sedating effects</td>
<td>Treatment strategies for either condition largely anecdotal</td>
</tr>
</tbody>
</table>
Monitor Adherence and Aberrant Behavior

Routinely monitor patient adherence to treatment plan

- Recognize & document aberrant drug-related behavior
  - In addition to patient self-report also use:
    - State PDMPs, where available
    - UDT
      - Positive for nonprescribed drugs
      - Positive for illicit substance
      - Negative for prescribed opioid
  - Family member or caregiver interviews
  - Monitoring tools such as the COMM, PADT, PMQ, or PDUQ
  - Medication reconciliation (e.g., pill counts)

PADT = Pain Assessment & Documentation Tool
Address Aberrant Drug-Related Behavior

**Behavior outside the boundaries of agreed-on treatment plan:**

Behaviors that are **less** indicative of aberrancy:

- Unsanctioned dose escalations or other noncompliance w/ therapy on 1 or 2 occasions
- Unapproved use of the drug to treat another symptom
- Openly acquiring similar drugs from other medical sources

Behaviors that are **more** indicative of aberrancy:

- Multiple dose escalations or other noncompliance w/ therapy despite warnings
- Prescription forgery
- Obtaining prescription drugs from nonmedical sources
Prescription Drug Monitoring Programs (PDMPs)

48 states have an operational PDMP
1 state & DC have enacted PDMP legislation, not yet operational
1 state has no legislation

Individual state laws determine

- Who has access to PDMP information
- Which drug schedules are monitored
- Which agency administers the PDMP
- Whether prescribers are required to register w/ the PDMP
- Whether prescribers are required to access PDMP information in certain circumstances
- Whether unsolicited PDMP reports are sent to prescribers
Status of State PDMPs

- Operational
- Enacted legislation, not yet operational
PDMPs Providing Database Access to Prescribers

Yes

No
PDMPs: Requirements for Prescribers to Register

1. Alabama: only physicians w/ or seeking pain management registration required to register.
2. Virginia: effective 7/1/2015.
3. Ohio: effective 1/1/2015.
4. Maine: automatically registered upon obtaining/renewing professional license.
**PDMP Benefits**

**Record of a patient’s controlled substance prescriptions**
- Some are available online 24/7
- Opportunity to discuss w/ patient

**Provide warnings of potential misuse/abuse**
- Existing prescriptions not reported by patient
- Multiple prescribers/pharmacies
- Drugs that increase overdose risk when taken together
- Patient pays for drugs of abuse w/ cash

*Prescribers can check their own prescribing Hx*
This report may contain another person’s controlled substance information. Review the “Patients that Match Search Criteria” section below to ensure all prescriptions belong to the requested individual.

**Search Criteria:** (( Last Name Begins ‘smith’ AND First Name Contains ‘john’) AND (D.O.B = ‘12/09/1965’ AND State = ‘CT’)) AND Request Period = ‘08/11/2011’ to ‘02/18/2012’

PDMP Unsolicited Patient Threshold Reports

*Reports automatically generated on patients who cross certain thresholds when filling prescriptions. Available in some states.*

- E-mailed to prescribers to whom prescriptions were attributed
- Prescribers review records to confirm it is your patient & you wrote the prescription(s) attributed to you
- If inaccurate, contact PDMP
- If you wrote the prescription(s), patient safety may dictate need to discuss the patient w/ other prescribers listed on report
  - Decide who will continue to prescribe for the patient & who might address drug abuse concerns.
Rationale for Urine Drug Testing (UDT)

Help to identify drug misuse/addiction
- Prior to starting opioid treatment

Assist in assessing adherence during opioid therapy
- As requirement of therapy w/ an opioid
- Support decision to refer

**UDT frequency is based on clinical judgment**

Check state regulations for requirements

Depending on patient’s display of aberrant behavior and whether it is sufficient to document adherence to treatment plan
Main Types of UDT Methods

**Initial testing** w/ IA drug panels:

- Classify substance as present or absent according to cutoff
- Many do not identify individual drugs within a class
- Subject to cross-reactivity
- Either lab based or at POC

**Identify specific drugs** &/or metabolites w/ sophisticated lab-based testing; e.g., GC/MS or LC/MS*

- Specifically confirm the presence of a given drug
  - e.g., morphine is the opiate causing a positive IA*
- Identify drugs not included in IA tests
- When results are contested

---

* GC/MS = gas chromatography/ mass spectrometry
IA = immunoassay
LC/MS = liquid chromatography/ mass spectrometry
## Detecting Opioids by UDT

### Most common opiate IA drug panels

- Detect “opiates” morphine & codeine, but doesn’t distinguish
- Do not reliably detect semisynthetic opioids
  - Specific IA panels can be ordered for some
- Do not detect synthetic opioids (e.g., methadone, fentanyl)
  - Only a specifically directed IA panel will detect synthetics

### GC/MS or LC/MS will identify specific opioids

- Confirm presence of a drug causing a positive IA
- Identify opioids not included in IA drug panels, including semisynthetic & synthetic opioids
- Identify opioids not included in IA drug panels, including semisynthetic & synthetic opioids
Specific Windows of Drug Detection

How long a person excretes drug &/or metabolite(s) at a concentration above a cutoff

Detection time of drugs in urine

Governed by various factors; e.g., dose, route of administration, metabolism, fat solubility, urine volume, & pH

For most drugs it is 1-3 days

Chronic use of lipid-soluble drugs increases detection time; e.g., marijuana, diazepam, ketamine
<table>
<thead>
<tr>

EDDP=2-ethylidene-1,5-dimethyl-3,3-diphenylpyrroloidine
Characteristics of Urine: Assessing Specimen

**Specimen color related to concentration**

Concentrated samples more reliable than dilute samples

**Temp within 4 min of voiding is 90-100°F**

**pH fluctuates within range of 4.5-8.0**

**Creatinine varies w/ hydration**

<table>
<thead>
<tr>
<th>Condition</th>
<th>Creatinine requirement</th>
</tr>
</thead>

</tr>
<tr>
<td>Creatinine &lt;2 mg/dL not consistent w/ human urine</td>
<td></td>
</tr>
</tbody>
</table>
Interpretation of UDT Results

Positive Result

Demonstrates recent use
- Most drugs in urine have detection times of 1-3 d
- Chronic use of lipid-soluble drugs: test positive for ≥1 wk

Does not diagnose
- Drug addiction, physical dependence, or impairment

Does not provide enough information to determine
- Exposure time, dose, or frequency of use

Negative Result

Does not diagnose diversion
- More complex than presence or absence of a drug in urine

May be due to maladaptive drug-taking behavior
- Bingeing, running out early
- Other factors: eg, cessation of insurance, financial difficulties
Be aware

Testing technologies & methodologies evolve

Differences exist between IA test menu panels vary
  • Cross-reactivity patterns
    – Maintain list of all patient’s prescribed & OTC drugs
    – Assist to identify false-positive result
  • Cutoff levels

Time taken to eliminate drugs
  • Document time of last use & quantity of drug(s) taken

Opioid metabolism may explain presence of apparently unprescribed drugs
Examples of Metabolism of Opioids

- **Codeine** → **Morphine** → **6-MAM*** → **Heroin**

  **Hydrocodone** → **Hydromorphone**

  **Oxycodone** → **Oxymorphone**

*6-MAM=6-monoacetylmorphine

- **t½=25-30 min**
- **t½=3-5 min**

© CO*RE 2015
Interpretation of UDT Results

Use UDT results in conjunction w/ other clinical information

Investigate unexpected results

- Discuss w/ the lab
- Schedule appointment w/ patient to discuss unexpected/abnormal results

Chart results, interpretation, & action

Do not ignore the unexpected positive result

- May necessitate closer monitoring &/or referral to a specialist

ER/LA Opioid Use in Pregnant Women

No adequate & well-controlled studies

Only use if potential benefit justifies the risk to the fetus

Be aware of the pregnancy status of your patients

If prolonged use is required during pregnancy:
  • Advise patient of risk of neonatal withdrawal syndrome
  • Ensure appropriate treatment will be available
Be Ready to Refer

Be familiar w/ referral sources for abuse or addiction that may arise from use of ER/LA opioids

SAMHSA substance abuse treatment facility locator

http://findtreatment.samhsa.gov/TreatmentLocator/faces/quickSearch.jspx

SAMHSA mental health treatment facility locator

Mr. Lee’s daily function has improved significantly over the past two years. You suggest titrating his dosage down or trying alternative pain management options. He is extremely resistant and tells you "Nothing else relieves my pain."

**Red Flag:**
Patient refuses to consider non-opioid treatment options

**Action:** Work with your patient to set treatment goals and expectations. Select and document a therapy plan or use a patient-provider agreement. Evaluate Mr. Lee for potential addiction; consider referral to psychiatry or addiction medicine.
Anticipate and Treat Common Adverse Effects

Use Informed Consent and Patient Provider Agreements

Use UDT and PDMP as Valuable Sources of Data About your Patient

**However, know their limitations**

Monitor Patient Adherence, Side Effects, Aberrant Behaviors, and Clinical Outcomes

Refer Appropriately if Necessary

</tbody>
</table>

Take this card with you every time you see your healthcare provider and tell him/her:
- Your complete medical and family history, including any history of substance abuse or mental illness
- If you are pregnant or are planning to become pregnant
- The cause, severity, and nature of your pain
- Your treatment goals
- All the medicines you take, including over-the-counter (non-prescription) medicines, vitamins, and dietary supplements
- Any side effects you may be having

Take your opioid pain medicine exactly as prescribed by your healthcare provider.

Counsel Patients About Proper Use

**Explain**

- Product-specific information about the prescribed ER/LA opioid
- How to take the ER/LA opioid as prescribed
- Importance of adherence to dosing regimen, handling missed doses, & contacting their prescriber if pain cannot be controlled

**Instruct patients/caregivers to**

- Read the ER/LA opioid **Medication Guide** received from pharmacy **every time** an ER/LA opioid is dispensed
- At every medical appointment explain all medications they take
Counsel Patients About Proper Use, cont’d

Counsel patients/caregivers:

• On the most common AEs of ER/LA opioids
• About the risk of falls, working w/ heavy machinery, & driving
• Call the prescriber for advice about managing AEs
• Inform the prescriber about AEs

Prescribers should report serious AEs to the FDA:

www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM163919.pdf
or 1-800-FDA-1088
Warn Patients

Never break, chew, crush or snort an oral ER/LA tablet/capsule, or cut or tear patches prior to use

- May lead to rapid release of ER/LA opioid causing overdose & death
- When a patient cannot swallow a capsule whole, prescribers should refer to PI to determine if appropriate to sprinkle contents on applesauce or administer via feeding tube

Use of CNS depressants or alcohol w/ ER/LA opioids can cause overdose & death

- Use with alcohol may result in rapid release & absorption of a potentially fatal opioid dose
- Other depressants include sedative-hypnotics & anxiolytics, illegal drugs
Warn Patients, cont’d

Misuse of ER/LA opioids can lead to death

- Take exactly as directed*
- Counsel patients/caregivers on risk factors, signs, & symptoms of overdose & opioid-induced respiratory depression, GI obstruction, & allergic reactions
- Call 911 or poison control 1-800-222-1222

*Serious side effects, including death, can occur even when used as recommended

Do not abruptly stop or reduce the ER/LA opioid use

- Discuss how to safely taper the dose when discontinuing
**WARNING:**

A person who at first only seems to be overmedicated may get much worse. They should be kept awake & watched closely.

If a child or pet ever swallows an opioid that was not prescribed for them, it is always an emergency. Call for help immediately.

### Overmedication Warning - Call Healthcare Provider

U.S. residents also can call the National Poison Hotline at 1-800-222-1222.

- Intoxicated behavior - confusion, slurred speech, stumbling.
- Feeling dizzy or faint.
- Feeling or acting very drowsy or groggy, or nodding off to sleep.
- Unusual snoring, gasping, or snorting during sleep.
- Difficulty waking-up from sleep and becoming alert or staying awake.

### Overdose Poisoning - Call Emergency Services

**Dial 911 in the US or Canada**

- Person cannot be aroused or wakened, or is unable to talk if awakened.
- Any trouble with breathing; such as shortness of breath, slow or light breathing, or stopped breathing.
- Gurgling noises coming from mouth or throat.
- Body is limp, seems lifeless. Face is pale, clammy.
- Fingernails or lips turned blue/purple.
- Slow or unusual heartbeat or stopped heartbeat.
Consider Prescribing Naloxone

Naloxone:

- An opioid antagonist
- Antidote to acute opioid toxicity
- Instruct patients to use in event of known or suspected overdose, **in addition to calling emergency services**

Candidates for naloxone include those:

- Taking high-doses of opioids
- Taking opioid preparations that may increase risk for overdose; eg, ER/LA opioids
- Undergoing opioid rotation
- Discharged from emergency medical care following opioid intoxication/poisoning
- Legitimate medical need for analgesia, coupled with suspected/confirmed substance abuse

Available as:

- Naloxone kit (w/ syringes & needles)
- EVZIO™ (naloxone HCl) auto-injector

Encourage patients to:

- Create an “overdose plan”
- Involve friends, family members, partners, &/or caregivers

Protecting the Community

Caution Patients

- Sharing ER/LA opioids w/ others may cause them to have serious AEs
  - Including death
- Selling or giving away ER/LA opioids is against the law
- Store medication safely and securely
- Protect ER/LA opioids from theft
- Dispose of any ER/LA opioids when no longer needed
  - Read product-specific disposal information included w/ ER/LA opioid

Know Your Poison Center’s Number.

1-800-222-1222
Source of Most Recent Rx Opioids Among Past-Year Users (2011-2012)

- Free: friend/relative: 54.0%
- 1 doctor: 19.7%
- Bought/took: friend/relative: 14.9%
- Other: 14.9%
- Drug dealer/stranger: 5.1%
- >1 doctor: 4.3%
- Bought on Internet: 0.2%

Rx medicines should only be taken when prescribed to you by a provider
  • Taking a pill prescribed for someone else is drug abuse and illegal, “even just once”

Misusing Rx drugs can be as dangerous as illegal “street” drugs

Mixing Rx opioids w/ alcohol or w/ sedatives / hypnotics is potentially fatal
Parents Should Set Good Examples & Educate Teens

Parent Survey

- 45% of parents have taken pain medications w/o a prescription at some point
- 14% have given their children pain medications w/o a prescription

Teen Survey

Teens continue to report that their parents do not talk to them about the risks of prescription drugs at the same levels of other abused substances
Substances Parents Have Discussed With Teens*

*As reported by teens

- Beer/alcohol: 81%
- Marijuana: 77%
- Cocaine/crack: 30%
- Rx pain reliever w/o doctor's Rx: 23%
- Any Rx drug used w/o doctor's Rx: 22%
- Heroin: 21%
- Ecstasy: 21%
- Methamphetamine: 21%
- Non-Rx cold/cough medicine to get high: 15%
- Steroids w/o doctor's Rx: 15%
- Inhalants: 14%

% of teens whose parents have discussed
Educate Parents: Not in My House

**Step 1: Monitor**

- Note how many pills in each prescription bottle or pill packet
- Keep track of refills for all household members
- If your teen has been prescribed a drug, coordinate & monitor dosages & refills
- Make sure friends & relatives—especially grandparents—are aware of the risks
- If your teen visits other households, talk to the families about safeguarding their medications
Educate Parents: 
Not in My House, cont’d

**Step Two: Secure**

- Do not store prescription meds in the medicine cabinet
- Keep meds in a safe place (e.g., locked cabinet)
- Tell relatives, especially grandparents, to lock meds or keep in a safe place
- Encourage parents of your teen’s friends to secure meds

**Step Three: Dispose**

- Take inventory of all prescription drugs in your home
- Discard expired or unused meds
Rx Opioid Disposal

**New “Disposal Act” expands ways for patients to dispose of unwanted/expired opioids**

Decreases amount of opioids introduced into the environment, particularly into water

---

**Collection receptacles**
Call DEA Registration Call Center at 1-800-882-9539 to find a local collection receptacle

---

**Mail-back packages**
Obtained from authorized collectors

---

**Local take-back events**
- Conducted by Federal, State, tribal, or local law enforcement
- Partnering w/ community groups

---

**Voluntarily maintained by:**
- Law enforcement
- Authorized collectors, including:
  - Manufacturer
  - Distributer
  - Reverse distributer
  - Retail or hospital/clinic pharmacy
    - Including long-term care facilities

---

**Last DEA National Prescription Drug Take-Back Day on September 27, 2014**

---

Other Methods of Opioid Disposal

If collection receptacle, mail-back program, or take-back event unavailable, throw out in household trash

- Take drugs out of original containers
- Mix w/ undesirable substance, e.g., used coffee grounds or kitty litter
  - Less appealing to children/pets, & unrecognizable to people who intentionally go through your trash
- Place in sealable bag, can, or other container
  - Prevent leaking or breaking out of garbage bag
- Before throwing out a medicine container
  - Scratch out identifying info on label
Prescription Drug Disposal

FDA lists especially harmful medicines – in some cases fatal w/ just 1 dose – if taken by someone other than the patient
- Instruct patients to check medication guide

Flush down sink/toilet if no collection receptacle, mail-back program, or take-back event available
- As soon as they are no longer needed
  - So cannot be accidentally taken by children, pets, or others
- Includes transdermal adhesive skin patches
  - Used patch worn for 3d still contains enough opioid to harm/kill a child
  - Dispose of used patches immediately after removing from skin
- Fold patch in half so sticky sides meet, then flush down toilet
- Do NOT place used or unneeded patches in household trash
  - Exception is Butrans: can seal in Patch-Disposal Unit provided & dispose of in the trash
Case:

Anne
47-Year-Old Female
Case: Anne

Anne has ovarian cancer

Stable disease based on recent imaging

Stable pain management for 1 yr w/hydromorphone ER 12 mg q24h

Last 2 months she asked for a renewal prescription 5-7 days early
  • When questioned did not realize she was requesting refills early

Query your state PDMP: she has not been doctor shopping

Collect urine sample: send to lab for pain management panel that includes hydromorphone, opiates, & drugs of abuse

She reports no change in her pain control
  • Current regimen is still effective
Anne: What Would You Do Next?

1. Refuse to give her a refill until the “correct” time

2. Make her next prescription for only 2 weeks & have her bring in her pill bottles for a count at next visit

3. Ask where she keeps her medications & how she secures them

Answer 3 is correct
Anne: Interview

Anne reports that she keeps her medications in her purse on top of the refrigerator.

Further questioning reveals that her niece & nephews have recently visited her home more often than usual.
Anne: What Now? Should You:

1. Only prescribe 2 wks of hydromorphone ER at a time & request she brings in her prescription bottles for pill counts at each visit.

2. Stress to her the safety concerns when ER/LA opioids are taken by someone for whom they are not prescribed; request she brings her prescription bottles for pill count next visit.

3. Call the police.

Answer 2 is correct.
Anne: Case Summary

**Explain to Anne**

- ER/LA opioids are extremely harmful—can be fatal with just 1 dose—if taken by someone other than the patient
- She is responsible for storing medication in a safe & secure place away from children, family members, & visitors
- If she cannot safeguard her medications, you will consider an alternative therapy

**You will not provide early renewal of prescription again**

**At the next visit**

- UDT positive for hydromorphone (negative other drugs)
- Anne reports she
  - Purchased a medication safe that same day
  - Counts her medication daily
  - Spoke to her sister regarding concerns about her niece/nephews
Challenge: The Offended Patient

**Red Flag:**
You decide not to request routine risk assessment for fear of creating conflict.

Mrs. Jorgensen has been your patient for eight years and has never caused any problems. When you ask her to undergo urine drug testing, she becomes upset and accuses you of not trusting her.

**Action:** Describe UDT as a routine part of medication monitoring rather than a “drug test”. Create an office policy for performing UDT on all ER/LA opioid patients. Practice by following universal precautions. Use a patient-provider agreement to clarify expectations of treatment.
Challenge: The Daughter’s Party

Red Flag:

Patients do not safeguard their opioid medications correctly

Your patient’s daughter, Jody, stole her father’s opioids from his bedside drawer to take to a “fishbowl party”. Her best friend consumed a mix of opioids and alcohol and died of an overdose.

Action: Always counsel patients about safe drug storage; warn patients about the serious consequences of theft, misuse, and overdose. Tell your patients that taking another person’s medication, even once, is against the law.
Establish Informed Consent

Counsel Patients about Proper Use

*Appropriate use of medication*
*Consequences of inappropriate use*

Educate the Whole Team

*Patients, families, caregivers*

Tools and Documents Can Help with Counseling

GENERAL DRUG INFORMATION FOR ER/LA OPIOID ANALGESIC PRODUCTS

Unit V
Prescribers should be knowledgeable about general characteristics, toxicities, & drug interactions for ER/LA opioid products:

- **ER/LA opioid analgesic products** are scheduled under the Controlled Substances Act & can be misused & abused.
- **Respiratory depression is the most serious opioid AE** can be immediately life-threatening.
- **Constipation is the most common long-term AE** should be anticipated.
For Safer Use: Know Drug Interactions, PK, & PD

| CNS depressants can potentiate sedation & respiratory depression | Some ER/LA products rapidly release opioid (dose dump) when exposed to alcohol
Some drug levels may increase without dose dumping |
|---|---|
| Use w/ MAOIs may increase respiratory depression
Certain opioids w/ MAOIs can cause serotonin syndrome | Can reduce efficacy of diuretics
Inducing release of antidiuretic hormone |
| Methadone & buprenorphine can prolong QTc interval | Drugs that inhibit or induce CYP enzymes can increase or lower blood levels of some opioids |
Opioid Tolerant

Tolerance to sedating & respiratory-depressant effects is critical to safe use of certain ER/LA opioid products, dosage unit strengths, or doses

Patients must be opioid tolerant before using

- Any strength of transdermal fentanyl or hydromorphone ER
- Certain strengths or daily doses of other ER products

Opioid-tolerant patients are those taking at least

- 60 mg oral morphine/day
- 25 mcg transdermal fentanyl/hr
- 30 mg oral oxycodone/day
- 8 mg oral hydromorphone/day
- 25 mg oral oxymorphone/day
- An equianalgesic dose of another opioid

FOR 1 WK OR LONGER
Key Instructions: ER/LA Opioids

Individually titrate to a dose that provides adequate analgesia & minimizes adverse reactions

Times required to reach steady-state plasma concentrations are product-specific

Refer to product information for titration interval

Continually re-evaluate to assess maintenance of pain control & emergence of AEs
**Key Instructions: ER/LA Opioids, cont’d**

- **During chronic therapy, especially for non-cancer-related pain, periodically reassess the continued need for opioids**
- **If pain increases, attempt to identify source, while adjusting dose**
- **When an ER/LA opioid is no longer required, gradually titrate dose downward to prevent signs & symptoms of withdrawal in physically dependent patients**

**Do not abruptly discontinue**
### Common Drug Information for This Class

#### Limitations of usage
- Reserve for when alternative options (e.g., non-opioids or IR opioids) are ineffective, not tolerated, or otherwise inadequate
- Not for use as an as-needed analgesic
- Not for mild pain or pain not expected to persist for an extended duration
- Not for acute pain

#### Dosage reduction for hepatic or renal impairment
See individual drug PI

#### Relative potency to oral morphine
- Intended as general guide
- Follow conversion instructions in individual PI
- Incomplete cross-tolerance & inter-patient variability require conservative dosing when converting from 1 opioid to another
  - Halve calculated comparable dose & titrate new opioid as needed

---

Collaborative for REMS Education

© CO*RE 2015

152
Transdermal Dosage Forms

*Do not cut, damage, chew, or swallow*

- Exertion or exposure to external heat can lead to fatal overdose
- Rotate location of application
- Prepare skin: clip - not shave - hair & wash area w/ water
- Monitor patients w/ fever for signs or symptoms of increased opioid exposure
- Metal foil backings are not safe for use in MRIs
Drug Interactions Common to this Class

Concurrent use w/ other CNS depressants can increase risk of respiratory depression, hypotension, profound sedation, or coma
Reduce initial dose of one or both agents

Avoid concurrent use of partial agonists* or mixed agonist/antagonists† with full opioid agonist
May reduce analgesic effect &/or precipitate withdrawal

May enhance neuromuscular blocking action of skeletal muscle relaxants & increase respiratory depression

Concurrent use w/ anticholinergic medication increases risk of urinary retention & severe constipation
May lead to paralytic ileus

*Buprenorphine; †Pentazocine, nalbuphine, butorphanol
Drug Information Common to This Class

Use in opioid-tolerant patients

- See individual PI for products which:
  - Have strengths or total daily doses only for use in opioid-tolerant patients
  - Are only for use in opioid-tolerant patients at all strengths

Contraindications

- Significant respiratory depression
- Acute or severe asthma in an unmonitored setting or in absence of resuscitative equipment
- Known or suspected paralytic ileus
- Hypersensitivity (e.g., anaphylaxis)
- See individual PI for additional contraindications
Patients MUST be opioid-tolerant in order to safely take most ER/LA opioid products.

Be familiar with drug-drug interactions, pharmacokinetics and pharmacodynamics of ER/LA opioids.

Central nervous system depressants (alcohol, sedatives, hypnotics, tranquilizers, tricyclic antidepressants) can have a potentiating effect on the sedation and respiratory depression caused by opioids.
Red Flag: You are woken by a telephone call at 2 am reporting that your patient, Mr. Diallo, is in the ER with apparent respiratory depression.

Action: Be familiar with risk factors for respiratory depression and know when opioids are contra-indicated. Anticipate possible risks and develop contingency plans. Teach patients, family, and caregivers about respiratory depression and its symptoms.

## Morphine Sulfate ER Capsules (Avinza)

### Dosing interval
- Once a day

### Key instructions
- Initial dose in opioid non-tolerant patients is 30 mg
- Titrate in increments of not greater than 30 mg using a minimum of 3-4 d intervals
- Swallow capsule whole (do not chew, crush, or dissolve)
- May open capsule & sprinkle pellets on applesauce for patients who can reliably swallow without chewing; use immediately
- MDD:* 1600 mg (renal toxicity of excipient, fumaric acid)

### Drug interactions
- Alcoholic beverages or medications w/ alcohol may result in rapid release & absorption of potentially fatal dose
- P-gp* inhibitors (e.g., quinidine) may increase absorption/exposure of morphine by ~2-fold

### Opioid-tolerant
- 90 mg & 120 mg capsules for use in opioid-tolerant patients only

### Product-specific safety concerns
- None

---

* MDD=maximum daily dose; P-gp= P-glycoprotein
Buprenorphine Transdermal System (Butrans)

**Dosing interval**
- One transdermal system every 7 d

**Key instructions**
- Initial dose in opioid non-tolerant patients on <30 mg morphine equivalents & in mild-moderate hepatic impairment: 5 mcg/h
- When converting from 30 mg-80 mg morphine equivalents, first taper to 30 mg morphine equivalent, then initiate w/ 10 mcg/h
- Titrate in 5 or 10 mcg/h increments by using no more than 2 patches of the 5 or 10 mcg/h system(s) w/ minimum of 72 h prior between dose adjustments. Total dose from all patches should be ≤20 mcg/h
- Maximum dose: 20 mcg/h due to risk of QTc prolongation
- Application
  - Apply only to sites indicated in PI
  - Apply to intact/non-irritated skin
  - Prep skin by clipping hair; wash site w/ water only
  - Rotate application site (min 3 wks before reapply to same site)
  - Do not cut
- Avoid exposure to heat
- Dispose of patches: fold adhesive side together & flush down toilet

| Relative potency: oral morphine                                                  | Equipotency to oral morphine not established                                       |
# Methadone Hydrochloride Tablets (Dolophine)

## Dosing interval
- Every 8 to 12 h

## Key instructions
- Initial dose in opioid non-tolerant patients: 2.5 – 10 mg
- Conversion of opioid-tolerant patients using equianalgesic tables can result in overdose & death. Use low doses according to table in full PI
- Dosage adjustments using a minimum of 1-2 d intervals
- High inter-patient variability in absorption, metabolism, & relative analgesic potency
- Opioid detoxification or maintenance treatment only provided in a federally certified opioid (addiction) treatment program (CFR, Title 42, Sec 8)

## Drug interactions
- Pharmacokinetic drug-drug interactions w/ methadone are complex
  - CYP 450 inducers may decrease methadone levels
  - CYP 450 inhibitors may increase methadone levels
  - Anti-retroviral agents have mixed effects on methadone levels
- Potentially arrhythmogenic agents may increase risk for QTc prolongation & torsade de pointe
- Benzodiazepines may increase respiratory depression

**NOTE:** While the dosing information below reflects the 8/20/14 FDA Blue Print, the CO*RE Expert Clinical Faculty believe it to be too aggressive and perhaps a risky approach. CO*RE Expert Clinical Faculty discourages methadone for opioid naive patients as an initial drug and recommends 4-5 d intervals for dosing adjustments.

| • Refer to full PI | • QTc prolongation & torsade de pointe  
| | • Peak respiratory depression occurs later & persists longer than analgesic effect  
| | • Clearance may increase during pregnancy  
| | • False-positive UDT possible  
| | | • Varies depending on patient’s prior opioid experience  

## Fentanyl Transdermal System
(Duragesic)

12, 25, 37.5*, 50, 62.5*, 75, 87.5*, and 100 mcg/hr
(*These strengths are available only in generic form)

### Dosing interval
- Every 72 h (3 d)

### Key instructions
- Use product-specific information for dose conversion from prior opioid
- Hepatic or renal impairment: use 50% of dose if mild/moderate, avoid use if severe
- Application
  - Apply to intact/non-irritated/non-irradiated skin on a flat surface
  - Prep skin by clipping hair, washing site w/ water only
  - Rotate site of application
  - Titrate using a minimum of 72 h intervals between dose adjustments
  - Do not cut
- Avoid exposure to heat
- Avoid accidental contact when holding or caring for children
- Dispose of used_unused patches: fold adhesive side together & flush down toilet
# Fentanyl Transdermal System (Duragesic), cont’d

## Key instructions

**Specific contraindications:**
- Patients who are not opioid-tolerant
- Management of
  - Acute or intermittent pain, or patients who require opioid analgesia for a short time
  - Post-operative pain, out-patient, or day surgery
  - Mild pain

## Drug interactions

- CYP3A4 inhibitors may increase fentanyl exposure
- CYP3A4 inducers may decrease fentanyl exposure
- Discontinuation of concomitant CYP P450 3A4 inducer may increase fentanyl plasma concentration

## Opioid-tolerant

- All doses indicated for opioid-tolerant patients only

## Drug-specific safety concerns

- Accidental exposure due to secondary exposure to unwashed/unclothed application site
- Increased drug exposure w/ increased core body temp or fever
- Bradycardia
- Application site skin reactions

## Relative potency: oral morphine

- See individual PI for conversion recommendations from prior opioid
# Morphine Sulfate ER-Naltrexone Tablets (Embeda)

## Dosing interval
- Once a day or every 12 h

## Key instructions
- Initial dose as first opioid: 20 mg/0.8 mg
- Titrate using a minimum of 1-2 d intervals
- Swallow capsules whole (do not chew, crush, or dissolve)
- Crushing or chewing will release morphine, possibly resulting in fatal overdose, & naltrexone, possibly resulting in withdrawal symptoms
- May open capsule & sprinkle pellets on applesauce for patients who can reliably swallow without chewing, use immediately

## Drug interactions
- Alcoholic beverages or medications w/ alcohol may result in rapid release & absorption of potentially fatal dose
- P-gp inhibitors (e.g., quinidine) may increase absorption/exposure of morphine by ~2-fold

## Opioid-tolerant
- 100 mg/4 mg capsule for use in opioid-tolerant patients only

## Product-specific safety concerns
- None
**Hydromorphone Hydrochloride ER Tablets (Exalgo)**

<table>
<thead>
<tr>
<th>Dosing interval</th>
<th>Once a day</th>
</tr>
</thead>
</table>

| Key instructions | • Use conversion ratios in individual PI  
|                  | • Start patients w/ moderate hepatic impairment on 25% dose prescribed for patient w/ normal function  
|                  | • Renal impairment: start patients w/ moderate on 50% & patients w/ severe on 25% dose prescribed for patient w/ normal function  
|                  | • Titrate in increments of 4-8 mg using a minimum of 3-4 d intervals  
|                  | • Swallow tablets whole (do not chew, crush, or dissolve)  
|                  | • Do not use in patients w/ sulfite allergy (contains sodium metabisulfite) |

| Drug interactions | None |

| Opioid-tolerant | All doses are indicated for opioid-tolerant patients only |

| Product-specific adverse reactions | Allergic manifestations to sulfite component |

| Relative potency: oral morphine | ~5:1 oral morphine to hydromorphone oral dose ratio, use conversion recommendations in individual product information |
Hydrocodone Bitartrate (Hysingla ER)

Extended–Release Tablets, 20 mg, 30 mg, 40 mg, 60 mg, 80 mg, 100 mg, and 120 mg

**Dosing interval**

- Once a day

**Key instructions**

- Opioid-naïve patients: initiate treatment with 20 mg orally once daily.
- During titration, adjust the dose in increments of 10 mg to 20 mg every 3 to 5 days until adequate analgesia is achieved.
- Swallow tablets whole (do not chew, crush, or dissolve).
- Consider use of an alternative analgesic in patients who have difficulty swallowing or have underlying gastrointestinal disorders that may predispose them to obstruction.
- Take one tablet at a time, with enough water to ensure complete swallowing immediately after placing in the mouth.
- Use 1/2 of the initial dose and monitor closely for adverse events, such as respiratory depression and sedation, when administering Hysingla ER to patients with severe hepatic impairment or patients with moderate to severe renal impairment.

# Tapentadol ER Tablets (Nucynta ER)

<table>
<thead>
<tr>
<th>Dosing interval</th>
<th>• Every 12 h</th>
</tr>
</thead>
</table>

### Key instructions

| • 50 mg every 12 h is initial dose in opioid non-tolerant patients |
| • Titrate by 50 mg increments using minimum of 3-d intervals |
| • MDD: 500 mg |
| • Swallow tablets whole (do not chew, crush, or dissolve) |
| • Take 1 tablet at a time w/ enough water to ensure complete swallowing immediately after placing in mouth |
| • Dose once/d in moderate hepatic impairment (100 mg/d max) |
| • Avoid use in severe hepatic & renal impairment |

### Drug interactions

| • Alcoholic beverages or medications w/ alcohol may result in rapid release & absorption of a potentially fatal dose of tapentadol |
| • Contraindicated in patients taking MAOIs |

### Opioid-tolerant

| • No product-specific considerations |

### Product-specific safety concerns

| • Risk of serotonin syndrome |
| • Angio-edema |

### Relative potency: oral morphine

| • Equipotency to oral morphine has not been established |
Oxymorphone Hydrochloride ER Tablets (Opana ER)

</tbody>
</table>
## Oxycodone Hydrochloride CR Tablets (OxyContin)

| Dosing interval | • Every 12 h |
| Key instructions | • Initial dose in opioid non-tolerant patients: 10 mg every 12 h |
| | • Titrate using a minimum of 1-2 days intervals |
| | • Hepatic impairment: start with 1/3-1/2 usual dosage |
| | • Renal impairment (creatinine clearance <60 mL/min): start with 1/2 usual dosage |
| | • Consider other analgesics in patients with difficulty swallowing or underlying GI disorders that predispose to obstruction. Swallow tablets whole (do not chew, crush, or dissolve) |
| | • Take 1 tablet at a time, with enough water to ensure complete swallowing immediately after placing in mouth |
| Drug interactions | • CYP3A4 inhibitors may increase oxycodone exposure |
| | • CYP3A4 inducers may decrease oxycodone exposure |
| Opioid-tolerant | • Single dose >40 mg or total daily dose >80 mg for use in opioid-tolerant patients only |
| Product-specific safety concerns | • Choking, gagging, regurgitation, tablets stuck in throat, difficulty swallowing tablet |
| | • Contraindicated in patients with GI obstruction |
| Relative potency: oral morphine | • Approximately 2:1 oral morphine to oxycodone oral dose ratio |
### Dosing interval
- Every 12 h

### Key instructions
- Opioid-naïve patients: initiate treatment w/ 10mg/5mg every 12 h
- Titrate using min of 1-2 d intervals
- Do not exceed 80 mg/40 mg total daily dose (40 mg/20 mg q12h)
- May be taken w/ or without food
- Swallow whole. Do not chew, crush, split, or dissolve: this will release oxycodone (possible fatal overdose) & naloxone (possible withdrawal)
- Hepatic impairment: contraindicated in moderate-severe impairment. In patients w/ mild impairment, start w/ $\frac{1}{3}$-$\frac{1}{2}$ usual dosage
- Renal impairment (creatinine clearance <60 mL/min): start w/ $\frac{1}{2}$ usual dosage

### Drug interactions
- CYP3A4 inhibitors may increase oxycodone exposure
- CYP3A4 inducers may decrease oxycodone exposure

### Opioid-tolerant
- Single dose >40 mg/20 mg or total daily dose of 80 mg/40 mg for opioid-tolerant patients only

### Product-specific safety concerns
- Contraindicated in patients w/ moderate-severe hepatic impairment

### Relative potency: oral morphine
- See individual PI for conversion recommendations from prior opioids
Hydrocodone Bitartrate ER Capsules (Zohydro ER)

<table>
<thead>
<tr>
<th>Dosing interval</th>
<th>• Every 12 h</th>

Thank you for completing the post-activity assessment for this CO*RE session.

Your participation in this assessment allows CO*RE to report de-identified numbers to the FDA.

A strong show of engagement will demonstrate that clinicians have voluntarily taken this important education and are committed to patient safety and improved outcomes.

THANK YOU!
Thank you!
